MEMORANDUM FOR THE RECORD

SUBJECT: NPIC Survey

1. Bud Wheelon caught me after this morning's Executive Committee meeting saying he owed the IG an apology as he felt remiss for not having come up with the names of people from DD/S&T who could work with us on the NPIC survey. He said that his chief problem was: how long they would have to be available, if we would require them for a whole month that it might create some problems.

2. I replied that we would be very glad to consider any names he wished to nominate, but only in connection with such special technical qualifications which might have some bearing on the PI problem. I said in all probability we would use them more as consultants, would not require their services for more than two or three days, and would probably consult them consecutively rather than all at once as a group. I explained that we had just started our survey and we had not yet made all the decisions on how we were going to organize it.

3. Wheelon, while giving every indication that he wants to be in on the act, seemed relieved that we would not require his people for four weeks or more at a time. He agreed to submit names to us together with an indication or description of their technical specialty. The matter of outside consultants was not discussed.
